

Utah Monthly Communicable Disease Report

March 2013

Background: The Utah Department of Health collects data on over 70 communicable diseases that affect residents of Utah. These data are monitored by epidemiologists to detect changes in disease activity and guide prevention and education efforts. For the purpose of this report, confirmed and probable cases are counted. Case statuses for diseases can be found in the disease plans, located at: http://health.utah.gov/epi/disease_plans_forms_factsheets.html. Individual disease investigations take time to complete; for this reason, data in this report should be considered provisional, and will change as more complete reports are received.
